The Inter-Professional Autism Clinic provides in-depth assessment and multi-disciplinary intervention for children ages 3-5 years old with Autism or suspected Autism. The clinic is staffed with a licensed occupational therapist, a licensed speech and language pathologist, and a licensed clinical psychologist, in addition to graduate and undergraduate students enrolled in each of these academic programs. The curriculum reflects an approach that merges intervention methods from these disciplines and can be individualized to meet each child’s unique needs. It will include opportunities for participation in individual as well as small and large group activities that are facilitated through a collaborative approach.
